

Dulce Belo completed her PhD degree in Chemistry from Instituto Superior Técnico (IST), Universidade de Lisboa, in 2002. She is a Principal researcher at the Solid State Group @IST and has devoted most of her scientific career to the design, synthesis and physical characterization of molecular materials with unconventional magnetic and transport properties. In 2020 she started a complementary line of research dedicated to Therapeutic Molecular Materials (T-MoMa). Since 2013, her responsibilities also include teaching duties as Invited Professor at the Chemistry Department of IST, having been annually distinguished with the pedagogical excellence award of IST.
